

Modern Systems Analysis and Design

Seventh Edition

Jeffrey A. Hoffer

Joey F. George

Joseph S. Valacich

Chapter 5

Initiating and Planning Systems Development Projects

Learning Objectives

- ✓ Describe the steps involved in the project initiation and planning process.
- ✓ Explain the need for and the contents of a Project Scope Statement and Baseline Project Plan.
- ✓ List and describe various methods for assessing project feasibility.
- ✓ Describe the differences between tangible and intangible benefits and costs, and between one-time vs. recurring benefits and costs.

Learning Objectives (Cont.)

- ✓ Perform cost-benefit analysis and describe what is meant by the time value of money, present value, discount rate, net present value, return on investment, and break-even analysis.
- ✓ Describe the general rules for evaluating technical risks associated with a systems development project.
- ✓ Describe the activities and participant roles within a structured walkthrough.

Initiating and Planning Systems Development Projects

- What must be considered when making the decision on the division between project initiation and planning (PIP) and analysis?
- How much effort should be expended on the PIP process?
- Who is responsible for performing the PIP process?
- Why is PIP such a challenging activity?

The Process of Initiating and Planning IS Development Projects

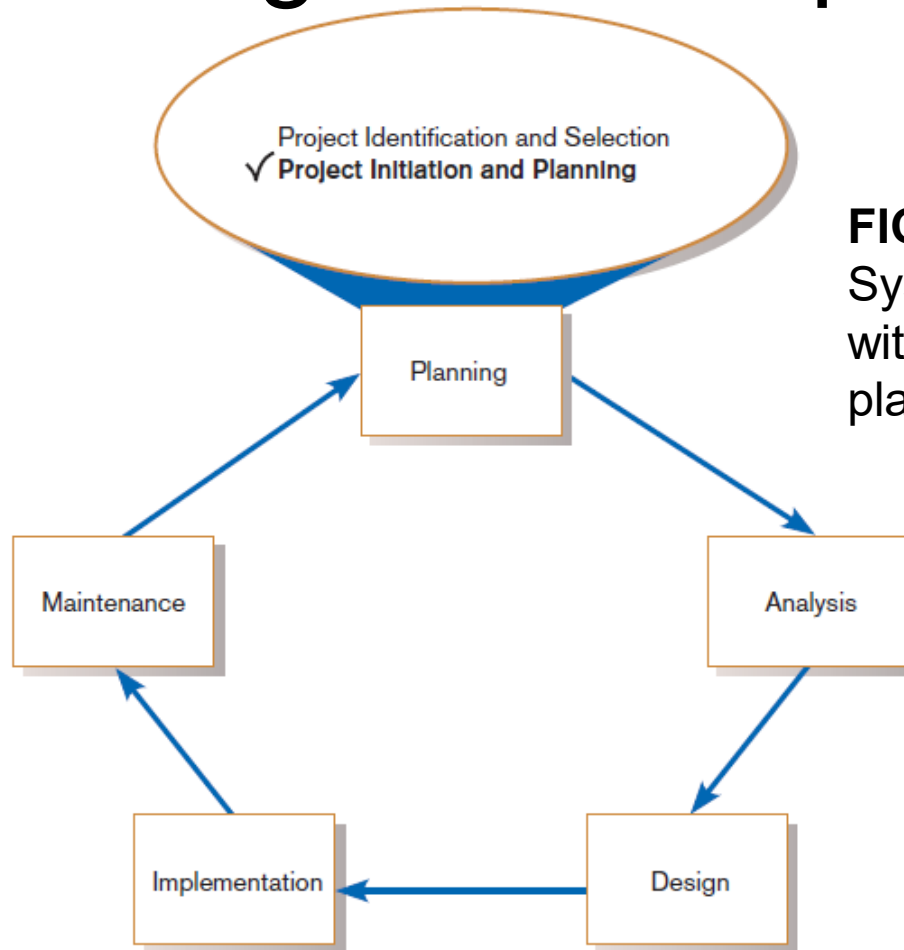

FIGURE 5-1

Systems development life cycle with project initiation and planning highlighted

The Process of Initiating and Planning IS Development Projects (Cont.)

- Project initiation focuses on activities designed to assist in organizing a team to conduct project planning.

The Process of Initiating and Planning IS Development Projects (Cont.)

- *Establishing the Project Initiation Team*
- *Establishing a Relationship with the Customer*
- *Establishing the Project Initiation Plan*
- *Establishing Management Procedures*
- *Establishing the Project Management Environment and Project Workbook*
- *Developing the Project Charter (see Ch 3)*

The Process of Initiating and Planning IS Development Projects (Cont.)

- The key activity of project planning is the process of defining clear, discrete activities and the work needed to complete each activity within a single project.
- The objective of the project planning process is the development of a *Baseline Project Plan (BPP)* and the *Project Scope Statement (PSS)*.

The Process of Initiating and Planning IS Development Projects (Cont.)

■ **Business Case**

- Justification for an information system
- Presented in terms of the tangible and intangible economic benefits and costs
- The technical and organizational feasibility of the proposed system

Elements of Project Planning

- Describe project scope, alternatives, feasibility.
- Divide project into tasks.
- Estimate resource requirements and create resource plan.
- Develop preliminary schedule.
- Develop communication plan.

Elements of Project Planning (Cont.)

- Determine standards and procedures.
- Identify and assess risk.
- Create preliminary budget.
- Develop a statement of work.
- Set baseline project plan.

Deliverables and Outcomes (Cont.)

■ **Baseline Project Plan (BPP)**

- A major outcome and deliverable from the PIP phase
- Contains the best estimate of a project's scope, benefits, costs, risks, and resource requirements

Deliverables and Outcomes (Cont.)

■ **Project Scope Statement (PSS)**

- A document prepared for the customer
- Describes what the project will deliver
- Outlines at a high level all work required to complete the project

Assessing Project Feasibility

- Economic
- Technical
- Operational
- Scheduling
- Legal and contractual
- Political

Assessing Project Feasibility (Cont.)

Pine Valley Furniture
System Service Request

REQUESTED BY Jackie Judson DATE: August 20, 2014

DEPARTMENT Marketing

LOCATION Headquarters, 570c

CONTACT Tel: 4-3290 FAX: 4-3270 E-Mail: jjudson

TYPE OF REQUEST	URGENCY
<input checked="" type="checkbox"/> New System	<input type="checkbox"/> Immediate: Operations are impaired or opportunity lost
<input type="checkbox"/> System Enhancement	<input type="checkbox"/> Problems exist, but can be worked around
<input type="checkbox"/> System Error Correction	<input checked="" type="checkbox"/> Business losses can be tolerated until new system installed

PROBLEM STATEMENT

Sales growth at PVF has caused a greater volume of work for the marketing department. This volume of work has greatly increased the volume and complexity of the data we need to deal with and understand. We are currently using manual methods and a complex PC-based electronic spreadsheet to track and forecast customer buying patterns. This method of analysis has many problems: (1) we are slow to catch buying trends as there is often a week or more delay before data can be taken from the point-of-sales system and manually enter it into our spreadsheet; (2) the process of manual data entry is prone to errors (which makes the results of our subsequent analysis suspect); and (3) the volume of data and the complexity of analyses conducted in the system seem to be overwhelming our current system—sometimes the program starts recalculating and never returns, while for others it returns information that we know cannot be correct.

SERVICE REQUEST

I request a thorough analysis of our current method of tracking and analysis of customer purchasing activity with the intent to design and build a completely new information system. This system should handle all customer purchasing activity, support display and reporting of critical sales information, and assist marketing personnel in understanding the increasingly complex and competitive business environment. I feel that such a system will improve the competitiveness of PVF, particularly in our ability to better serve our customers.

IS LIAISON Jim Woo, 4-6207 FAX: 4-6200 E-Mail: jwoo

Assessing Project Feasibility (Cont.)

- **Economic feasibility:** a process of identifying the financial benefits and costs associated with a development project
 - Often referred to as a *cost-benefit analysis*
 - Project is reviewed after each SDLC phase in order to decide whether to continue, redirect, or kill a project

Determining Project Benefits

- **Tangible benefits** refer to items that can be measured in dollars and with certainty.
- Examples include:
 - reduced personnel expenses
 - lower transaction costs, or
 - higher profit margins.

Determining Project Benefits (Cont.)

- Most tangible benefits will fit within the following categories:
 - Cost reduction and avoidance
 - Error reduction
 - Increased flexibility
 - Increased speed of activity
 - Improvement of management planning and control
 - Opening new markets and increasing sales opportunities

Determining Project Benefits (Cont.)

TANGIBLE BENEFITS WORKSHEET	
Customer Tracking System Project	
	Year 1 through 5
A. Cost reduction or avoidance	\$ 4,500
B. Error reduction	2,500
C. Increased flexibility	7,500
D. Increased speed of activity	10,500
E. Improvement in management planning or control	25,000
F. Other _____	0
TOTAL tangible benefits	\$50,000

Figure 5-3
Tangible benefits for Customer Tracking
System (Pine Valley Furniture)

Determining Project Benefits (Cont.)

- **Intangible benefits** are benefits derived from the creation of an information system that cannot be easily measured in dollars or with certainty.
 - May have direct organizational benefits, such as the improvement of employee morale
 - May have broader societal implications, such as the reduction of waste creation or resource consumption

Determining Project Benefits (Cont.)

TABLE 5-3 Intangible Benefits from the Development of an Information System

- | | |
|---|--|
| <ul style="list-style-type: none">• Competitive necessity• More timely information• Improved organizational planning• Increased organizational flexibility• Promotion of organizational learning and understanding• Availability of new, better, or more information• Ability to investigate more alternatives• Faster decision making | <ul style="list-style-type: none">• More confidence in decision quality• Improved processing efficiency• Improved asset utilization• Improved resource control• Increased accuracy in clerical operations• Improved work process that can improve employee morale or customer satisfaction• Positive impacts on society• Improved social responsibility• Better usage of resources (“greener”) |
|---|--|

Determining Project Costs

- **Tangible cost:** a cost associated with an information system that can be measured in dollars and with certainty
- IS development tangible costs include:
 - Hardware costs
 - Labor costs, or
 - Operational costs, including employee training and building renovations.

Determining Project Costs (Cont.)

- **Intangible cost:** a cost associated with an information system that cannot be easily measured in terms of dollars or with certainty
- Intangible costs can include:
 - Loss of customer goodwill,
 - Employee morale, or
 - Operational inefficiency.

Determining Project Costs (Cont.)

- **One-time cost:** a cost associated with project start-up and development or system start-up
- These costs encompass activities such as:
 - Systems development,
 - New hardware and software purchases,
 - User training,
 - Site preparation, and
 - Data or system conversion.

Determining Project Costs (Cont.)

- **Recurring cost:** a cost resulting from the ongoing evolution and use of a system
- Examples of these costs include:
 - Application software maintenance
 - Incremental data storage expenses
 - Incremental communications
 - New software and hardware leases, and
 - Supplies and other expenses (i.e., paper, forms, data center personnel).

Determining Project Costs (Cont.)

ONE-TIME COSTS WORKSHEET Customer Tracking System Project	
	Year 0
A. Development costs	\$20,000
B. New hardware	15,000
C. New (purchased) software, if any	
1. Packaged applications software	5,000
2. Other _____	0
D. User training	2,500
E. Site preparation	0
F. Other _____	0
TOTAL one-time costs	\$42,500

Figure 5-4

One-time costs for Customer Tracking System (Pine Valley Furniture)

Determining Project Costs (Cont.)

RECURRING COSTS WORKSHEET Customer Tracking System Project	
	Year 1 through 5
A. Application software maintenance	\$25,000
B. Incremental data storage required: 20 GB × \$50 (estimated cost/MB = \$50)	1000
C. Incremental communications (lines, messages, . . .)	2000
D. New software or hardware leases	0
E. Supplies	500
F. Other _____	0
TOTAL recurring costs	\$28,500

Figure 5-5

Recurring costs for Customer Tracking System (Pine Valley Furniture)

Determining Project Costs (Cont.)

- Both one-time and recurring costs can consist of items that are fixed or variable in nature.
- *Fixed costs* are billed or incurred at a regular interval and usually at a fixed rate.
 - Example: facility lease payment
- *Variable costs* are items that vary in relation to usage.
 - Example: long-distance charges

Determining Project Costs (Cont.)

TABLE 5-4 Possible Information Systems Costs

Type of Cost	Examples	Type of Cost	Examples
Procurement	Hardware, software, facilities infrastructure Management and staff Consulting and services	Project	Infrastructure replacement/improvements Project personnel Training Development activities Services and procurement Organizational disruptions Management and staff
Start-Up	Initial operating costs Management and staff Personnel recruiting	Operating	Infrastructure replacement/improvements System maintenance Management and staff User training and support

(Source: Based on King and Schrems, 1978; Sonje, 2008.)

Determining Project Costs (Cont.)

TABLE 5-5 Guidelines for Better Cost Estimating

1. Have clear guidelines for creating estimates.
2. Use experienced developers and/or project managers for making estimates.
3. Develop a culture where all project participants are responsible for defining accurate estimates.
4. Use historical data to help in establishing better estimates of costs, risks, schedules, and resources.
5. Update estimates as the project progresses.
6. Monitor progress and record discrepancies to improve future estimates.

(Source: Based on Lederer and Prasad, 1992; Hubbard, 2007; Sonje, 2008.)

The Time Value of Money

- **Time value of money (TVM):** the concept that money available today is worth more than the same amount tomorrow
- **Discount rate:** the rate of return used to compute the present value of future cash flows (*the cost of capital*)
- **Present value:** the current value of a future cash flow

The Time Value of Money

- Net Present Value (NPV)
 - Use discount rate to determine present value of cash outlays and receipts
- Return on Investment (ROI)
 - Ratio of cash receipts to cash outlays
- Break-Even Analysis (BEA)
 - Amount of time required for cumulative cash flow to equal initial and ongoing investment

The Time Value of Money (Cont.)

■ Net Present Value

- $PV_n =$ *present value* of Y dollars n years from now based on a *discount rate* of i .
- NPV = sum of PVs across years.
- Calculates *time value of money*

$$PV_n = Y \times \frac{1}{(1 + i)^n}$$

The Time Value of Money (Cont.)

- **Break-even analysis:** a type of cost-benefit analysis to identify at what point (if ever) benefits equal costs

$$\text{Break-Even Ratio} = \frac{\text{Yearly NPV Cash Flow} - \text{Overall NPV Cash Flow}}{\text{Yearly NPV Cash Flow}}$$

The Time Value of Money (Cont.)

Figure 5-7
Break-even analysis for Customer Tracking System (Pine Valley Furniture)

Assessing Technical Feasibility

- **Technical feasibility:** a process of assessing the development organization's ability to construct a proposed system

Assessing Technical Feasibility (Cont.)

- The potential consequences of not assessing and managing risks can include:
 - Failure to attain expected benefits from the project
 - Inaccurate project cost estimates.
 - Inaccurate project duration estimates.
 - Failure to achieve adequate system performance levels.
 - Failure to adequately integrate the new system with existing hardware, software, or organizational procedures.

Project Risk Factors

- Project size
 - Team size, organizational departments, project duration, programming effort
- Project structure
 - New vs. renovated system, resulting organizational changes, management commitment, user perceptions
- Development group
 - Familiarity with platform, software, development method, application area, development of similar systems
- User group
 - Familiarity with IS development process, application area, use of similar systems

Assessing Technical Feasibility (Cont.)

- Four general rules emerged as technical risk assessments:
 - *Larger projects are riskier than smaller projects.*
 - *A system in which the requirements are easily obtained and highly structured will be less risky than one in which requirements are messy, ill structured, ill defined, or subject to the judgment of an individual.*

Assessing Technical Feasibility (Cont.)

- *The development of a system employing commonly used or standard technology will be less risky than one employing novel or nonstandard technology.*
- *A project is less risky when the user group is familiar with the systems development process and application area than if unfamiliar.*

Assessing Technical Feasibility (Cont.)

		Low Structure	High Structure
High Familiarity with Technology or Application Area	Large Project	(1) Low risk (very susceptible to mismanagement)	(2) Low risk
	Small Project	(3) Very low risk (very susceptible to mismanagement)	(4) Very low risk
Low Familiarity with Technology or Application Area	Large Project	(5) Very high risk	(6) Medium risk
	Small Project	(7) High risk	(8) Medium-low risk

FIGURE 5-8

Effects of degree of project structure, project size, and familiarity with application area on project implementation risk (*Source: Based on 7th Applegate, Austin, and McFarlan. 2007; Tech Republic, 2005.*)

Assessing Other Feasibility Concerns

■ Operational

- Does the proposed system solve problems or take advantage of opportunities?

■ Scheduling

- Can the project time frame and completion dates meet organizational deadlines?

■ Legal and Contractual

- What are the legal and contractual ramifications of the proposed system development project?

■ Political

- How do key stakeholders view the proposed system?

Building the Baseline Project Plan

- A **Baseline Project Plan (BPP)** is a document intended primarily to guide the development team.
- Sections:
 - Introduction
 - System description
 - Feasibility assessment
 - Management issues

Building the Baseline Project Plan (Cont.)

- Project Scope statement is part of the BPP introduction.
- Sections:
 - Problem statement
 - Project objectives
 - Project description
 - Business benefits
 - Deliverables
 - Expected duration

Factors in Determining Scope

- Organizational units affected by new system
- Current systems that will interact with or change because of new system
- People who are affected by new system
- Range of potential system capabilities

Diagram Depiction of Project Scope

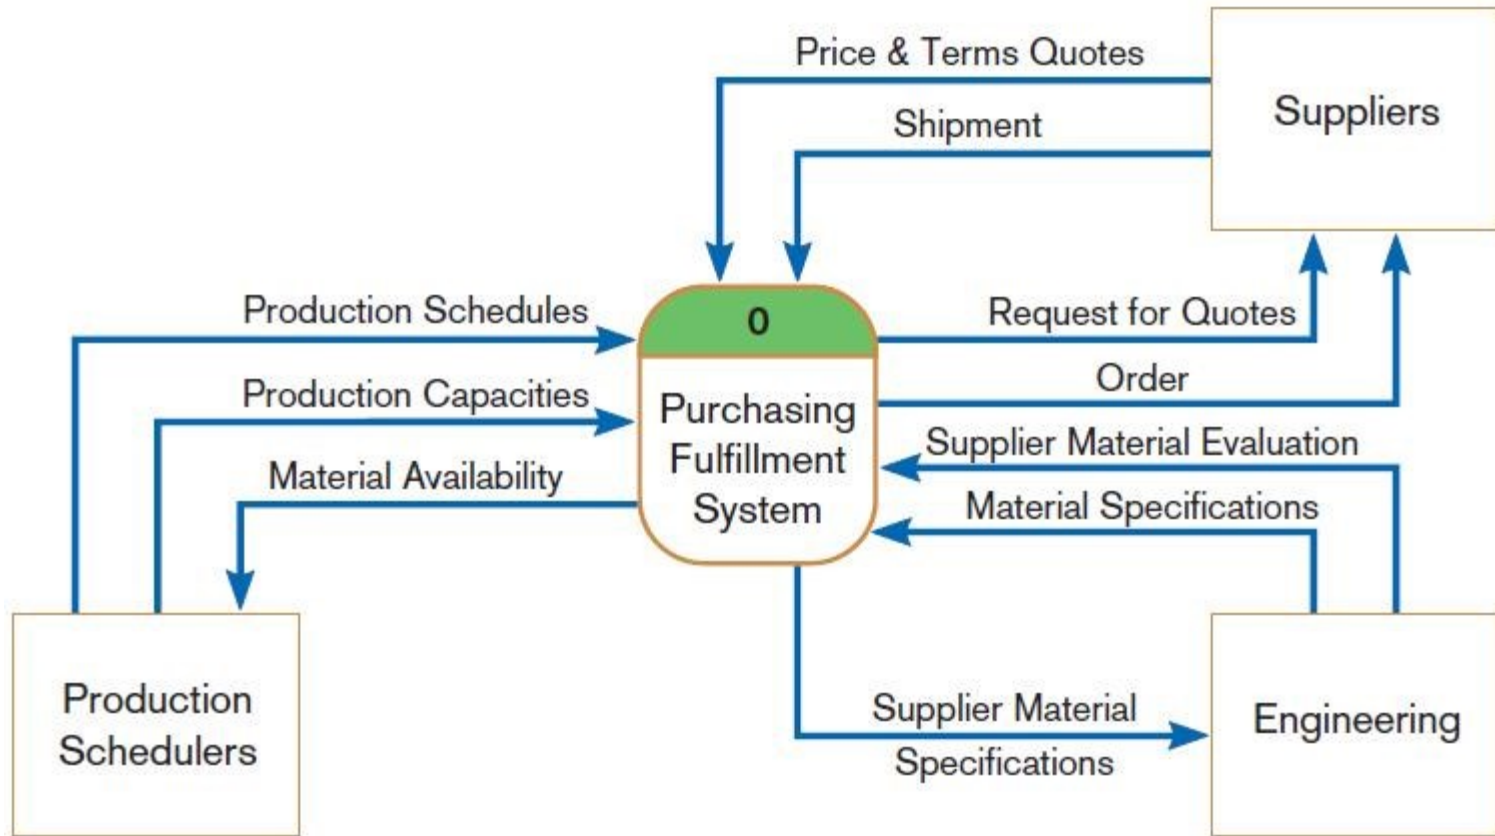

FIGURE 5-11

Context-level data flow diagram showing project scope for Purchasing Fulfillment System (Pine Valley Furniture)

Building the Baseline Project Plan (Cont.)

- *System description* section outlines possible alternative solutions.
- *Feasibility assessment* section outlines issues related to project costs and benefits, technical difficulties, and other such concerns.
- *Management issues* section outlines a number of managerial concerns related to the project.

Reviewing the Baseline Project Plan

- **Structured Walkthroughs:** a peer-group review of any product created during the system development process
- **Roles:** coordinator, presenter, user, secretary, standard-bearer, maintenance oracle
- Can be applied to BPP, system specifications, logical and physical designs, program code, test procedures, manuals and documentation

Summary

- In this chapter you learned how to:
 - ✓ Describe steps involved in project initiation and planning.
 - ✓ Explain the need for and contents of Statement of Work and Baseline Project Plan.
 - ✓ List and describe methods for assessing project feasibility.
 - ✓ Describe tangible vs. intangible costs and benefits, and one-time vs. recurring costs and benefits.

Summary (Cont.)

- ✓ Perform cost-benefit analysis, and understand time value of money, present value, discount rate, return on investment, and break-even analysis.
- ✓ Describe rules for evaluating technical risk of systems development projects.
- ✓ Describe activities and roles of structured walkthroughs.
